## **DETAILED ACTION**

### ***Claim Objections***

1. Claims 7-9, 15, and 17 are objected to because of the following informalities:  
they lack an ending period. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:  
  
The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
3. Claims 1-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites "wherein the current blocking region operates as a reversed biased PN junction" in line 6. It is unclear what additional structural limitations are being implied by how the current blocking region operates. Claims 2-10 are rejected for the same reason.

Claim 11 recites "the current blocking region acts as a reverse biased PN junction to block current. It is unclear what additional method of fabricating steps are being implied by that limitation. Claims 12-19 are rejected for the same reason.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 10, 11, 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Goldstein et al (6,046,065). Goldstein et al discloses the claimed invention. Note figure

1 which

illustrates an

optoelectronic device comprising an active region (4), a semiconductor region (10, 11, 13, 14), a tunnel junction (5,7, note col. 7 lines 23-25) between the active region (4) and the semiconductor region (10, 11, 13, 14), and a current blocking region (8) between the active region and the semiconductor region wherein the current blocking region confines a current between the active region and the semiconductor region to the current through the tunnel junction.

4. Claims 1-19 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Gore (WO 98/07218). Figure 2 clearly discloses the claimed invention.
